

## Beauflor's Antibacterial Protection KILLS 99% OF BACTERIA

All types of flooring are unfortunately an ideal habitat for all kinds of bacteria but in these uncertain times it's reassuring to know that our Beauflor vinyl floors are very easy to clean and extremely hygienic.

### Powerful bacterial protection built-in

On a carefully selected range of our vinyl floors we added a bactericidal PU lacquer to achieve the ISO 22196 standards. Our products listed below that meet this standard have been designed with the ability of preventing surface bacteria growth or even kill them over a 24 hour period. This demonstrates our dedication to give our customers total peace of mind for today and the future.

### Safe and Sound

Beside these antibacterial properties, Beauflor delivers a cleaner and more hygienic living space. Our vinyl is 100% phthalate free and is compliant with the most strictest norms in VOC emission thus improving indoor air quality.

### You care we care

It is essential to note that, no matter the type of flooring you choose, it cannot offer total protection. What it can do, however, is contribute to a cleaner, more hygienic environment where other germs and bacteria have less of a chance to spread - making our working environment a safer place to be.
